Health: Hospital Fire Damper Replacement Programme

Alliance has been engaged in works at the Queens' Medical Centre (QMC) since mid 2016 when the company embarked upon a significant fire damper replacement programme and associated ventilation and roof-void access works. These works in a live hospital environment require the highest levels of programming, co-ordination and day-to-day flexibility to ensure minimum disruption.

Naturally all staff are Disclosure (DBS) checked and appropriately trained and supervised. Each area of work is the subject of the method statement, risk assessments and permits, with particular precautions to prevent dirt or contaminating the wards. Privacy for patients is also assured. Each fire damper is comprehensively labelled and recorded.

- ▶ Ventilation & ductwork
- ▶ surveying & programming
- ▶ high levels of liaison with staff and facilities
- ▶ courteous flexible working
- ▶ absolute work hygiene requirements

When: June 2016 to date

Where: Queens Medical Centre, Nottingham

Imperative: live hospital environment

Result: A successful and on ongoing programme of work by the Alliance team backed by years of assembled experience in the mechanical & HVAC projects and considerable experience in the health sector. To discuss this, or your project, contact Alliance:
